

HALOPERIDOL AND ZIPRASIDONE FOR TREATMENT OF DELIRIUM IN CRITICAL ILLNESS

December 27, 2018

ZIPRASIDONE VS PLACEBO
Odd Ratio, 1.04 [95% CI, 0.73 to 1.48]

HALOPERIDOL VS PLACEBO
Odd Ratio, 0.88 [95% CI, 0.64 to 1.21]

CONCLUSION

Among critically ill patients with acute respiratory failure or shock and hypoactive or hyperactive delirium, the use of haloperidol or ziprasidone, as compared with placebo does not alter the duration of delirium.
